

# Magaya Supply Chain and GLT Logistics Portal Integration

## Inland Transportation Execution for Magaya Supply Chain

The GLT Logistics Portal integration for Magaya Supply Chain connects inland transportation workflows directly within your logistics operations. Shipment data entered into the GLT Logistics Portal automatically syncs with Magaya, helping teams eliminate duplicate data entry, reduce manual work, and improve operational visibility across inland, warehouse, import, and export activities.

### Reduce Manual Work

Eliminate duplicate data entry by automatically syncing shipment information between the GLT Logistics Portal and Magaya Supply Chain. Keep quotes, pickup information, and transportation details aligned across both systems.

### Access Carrier Capacity Faster

Quickly access vetted LTL and dedicated carrier capacity through the GLT Logistics network, helping teams move faster from quote to execution while improving responsiveness to customers.

### Create a More Connected Workflow

Manage inland transportation, warehouse, export, and import operations through one connected workflow with centralized visibility across both platforms.

## Features

### Auto-Sync for Transportation Data

Pickup orders and ground shipments automatically flow between the GLT Logistics Portal and Magaya Supply Chain.

### Faster Transportation Execution

Access vetted LTL and dedicated carrier capacity in seconds through an integrated transportation workflow.

### Custom-Branded Customer Experience

Generate branded documents and customer-facing interfaces directly within the workflow.

## Business Impact

- Error-related rework costs can decrease by up to 88%
- Same-day quote turnaround can improve close rates by 10–15%
- Documentation-related compliance risks can decrease by up to 95%
